

JET BELLOW TELESCOPIC

Description

Jet Bellows or Telescopic is tool or equipment which is used for many industry. It can be used as ducting or distribution material such as air, dust, coal or cement. We have many kind raw material Jet Bellow or Telescopic. We design and try to give solution with what our customer's needs.

Application

Removable Insulation pads, protective flange shields and equipment covers, welding curtains and expansion joint.

Characteristics

- Water proffing ◆
- Good abrasion and flexibility ◆
- Good electrical insulation effect ◆
- Dirt and oil repelling effect ◆
- Chemically and alkaline resistant ◆
- Flame resistance and high thermal stability ◆

Temperature Service

- Silicon Temperature range from -50 to 300°C (+/-) ◆
- Fiber glass Fabric Temp 550°C ◆

Performance & Technical Features - Benefits

- ◆ Flexible chute in Meta Aramid covered by Silicon Cloth makes the bellow weather-proof, highly abrasion and temperature-resistant and durable. Featured with reverse cone inside, raises loading bellow gradually and improves material distribution inside the tanker Two lifting cables outside the material flow raise and lower the loading bellow without cable wear due to material friction and obstruction to material flow.
